Web Developer, currently specializing in Android development using Java and Kotlin, working on optimizing two intuitive apps for TaxiMe. While my recent work has focused on Android, I am actively seeking Full-Stack Web Development roles where I can apply and further expand my experience in both front-end and back-end development.

Previously, I worked as a Full-Stack Developer for an award-winning UK digital agency, gaining expertise in Java MVC, Vue.js, and JavaScript. I also have hands-on experience with Ionic, Magento2, PHP, and WordPress. Adept at combining creativity and logical problem-solving across both mobile and web platforms, with a strong foundation in object-oriented programming.

Professional Experience

TaxiMe, Junior Android Developer

12/2024 – present

Sofia, Bulgaria

- Developed and maintained core features for the TaxiMe Android applications using Java, Kotlin, Firebase, and gRPC, supporting real-time GPS tracking, driver-client matching, and session management.
- Collaborated with backend developers to ensure efficient data flow and API integration between mobile and server-side systems.
- Took initiative in improving internal workflows by introducing structured documentation and task tracking, helping the team deliver features more reliably.
- Provided support for TaxiMe's WordPress-based website, maintaining content updates and ensuring stable functionality as the company's main public-facing platform.
- Participated in a transition from XML-based layouts to Jetpack Compose. As part of this effort, built new interactive features including real-time notification updates and live ride status indicators, improving the overall user experience and responsiveness of the app.
- Gained hands-on experience with test automation by building UI tests with Appium, integrated into a Jenkins CI pipeline – reducing manual QA efforts and improving release quality.

Enigma Interactive, Java Web Developer

03/2022 - 11/2024

Newcastle, United Kingdom

- Directed the full software development life cycle from concept to production, ensuring efficient execution and timely delivery of web applications.
- Conducted R&D for optimal technological solutions, creating comprehensive technical specifications and test plans.
- Leveraged a wide spectrum of technologies and frameworks including Java, PHP, JavaScript, TypeScript, AngularJS, Vue.js, WordPress, Craft, Magento2, and Ionic.
- Refactored and optimized legacy codebases, upgrading outdated systems for enhanced performance, scalability, and maintainability.
- Developed and integrated new features and web components across various client web projects.
- Worked extensively with a custom Java MVC framework, performing in-depth code analysis and delivering new solutions on a large-scale in-house platform.
- Delivered over nine eCommerce and informational websites tailored to client needs.
- Provided mentorship and technical training to four interns and over 25 work experience students.

Razorblue Group, PHP Developer

04/2021 - 03/2022

Stockton-on-Tees, United Kingdom

- Developed and tested software for internal applications using PHP, SQL, HTML, CSS, JavaScript, and AJAX.
- Collaborated with internal stakeholders to determine requirements for new developments.
- Supported the internal business management system by troubleshooting, diagnosing, and resolving issues, reducing the issues log by 19%.
- Built reusable, well-commented code for the CRM system, saving company resources.
- Assisted and supported existing client applications, including bug fixes and general upkeep using C# and Vue.js.

Education
